SAVING LIVES ONE COURSE AT A TIME

Does CPR Lead To Any Complications For Sudden Cardiac Arrest Patients?

When a bystander fails to perform CPR well, it can lead to complications.

CPR Complications Include:

- Fractures to the sternum
- Bleeding into the chest
- Bruising of the heart
- Damage to lungs

Only 2% of victims go through these complications.

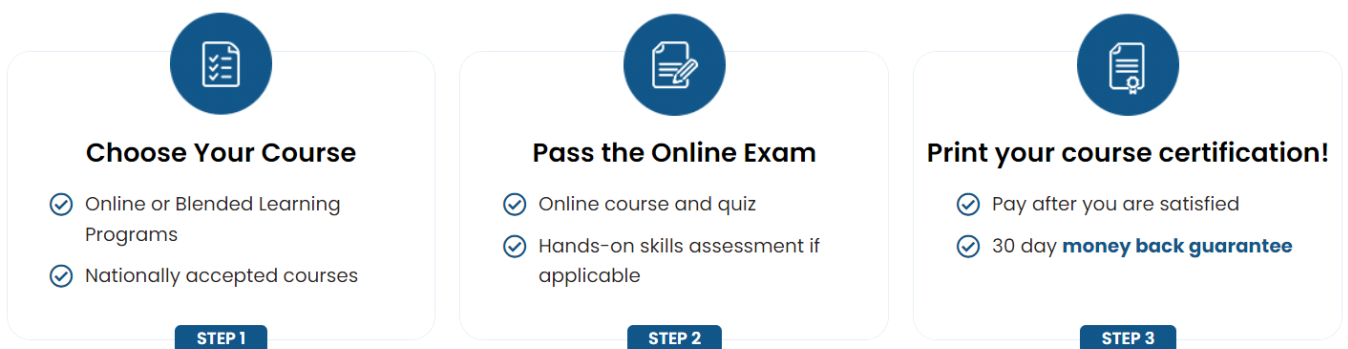

However, you can avoid such complications by performing CPR at the right time with appropriate training and **SAVE A LIFE!**

And there must be nothing above saving a life when you can.

How can you train yourself for CPR well to avoid these complications even if the percentage is low?
