

FAQs On Chickenpox (Varicella)

Chickenpox is a disease caused by Varicella virus that makes you feel sick and gives you a rash with blisters. It is very contagious and spreads by touching the rash or through the air. People with weak immune systems can develop complications like pneumonia or brain infection. A vaccine can protect you from getting chickenpox.

FAQs on Chickenpox:

How serious is chickenpox?

It can be mild when it lasts more than 4-5 days.

What is the most common complication of chickenpox?

Bacterial infection is the most common complication of chickenpox.

How long is it contagious for?

Patients having chickenpox are contagious for 1-2 days before the rashes but continue to be so for 4-5 days after the rashes appear.

How easy is it to catch chickenpox in the USA now?

There have been only a few cases of chickenpox in the USA since 1995. To be more cautious, one still needs to know the First Aid tips for treating it at home.

Learn First Aid and save someone you know at the right time in the face of medical emergencies.
